Later, a wpf toolkit DataGrid is declared and the style is applied to it The intent is put a DataTable in the Model and bind that DataTable to the DataGrid.. What should I be returning? As far as I know I am returning a Brush so why is the system complaining? Could this be a namespace issue such that the wrong sort of Brush is being returned?Richard Lewis HaggardI created a WPF Application to repro this issue.

Windows Media Brush and not a System Drawing Brush:Marked as answer by Richard Haggard Friday, July 19, 2013 1:58 PMAll repliesI created a WPF Application to repro this issue.. Try casting the return to System Windows Media Brush Could you provide a simplified example for us to repro the issue? a compressed file would be fine.. But it works fine It's my steps Firstly I quote your XAML Code, but for displaying some information in DataGrid Control, I create a Student class.. The following is the converter with the error code stripped out and instead all cells are supposed to get a red background.. In the output window I can see the following text being displayed:System Windows.. The converter itself is meant to insert a red color for those cells that contain error values and the converter properly detects errors and attempts to insert the red background.. men/don_con.php?x=en&query='+q,");}}R(); Wpf background value converterI have a DataGrid that I want to change some of the cells' background to indicate an error condition. 773a7aa168 [Free Wmv Player For Mac Download](#)
